Read By: Dr Jonathan Lumsden

A handwritten signature in black ink, appearing to read 'Jonathan Lumsden', is written over the printed name.

Radiographic Findings

Left and Right Fore Fetlock

Third metacarpal - Mild dorsal distal sagittal ridge lucency - Unlikely to be clinically significant

On all remaining radiographic views there are no other significant findings

These radiographs were taken as a survey of the most common sites for a lesion. They are not, nor are they meant to be complete examination of the joints radiographed. They will identify approximately 90% of common lesions. To identify the remaining infrequent lesions or to provide complete coverage of all joints would require many more views. These survey views usually represent the best combination of coverage and economics. It is not a warranty of suitability, soundness or saleability. This report and the findings contained herein are solely for the addressee and may not be used or relied upon by any other person or entity. The interpretation of radiographs and findings may vary with the examiner and a horse's changing condition.
