VETERINARY REPORT: Shengli '16

Report requested by: Arrowfield Pastoral Pty Ltd / Arrowfield / Insurance Co.

The above yearling was presented to the SEH today to remove screws that were placed across bone cysts of both front pasterns. The horse was anaesthetised and both screws removed without complication. This involved removing some bone overlying the screw heads under radiographic guidance. The procedure was completed without complication and the yearling made a good recovery from anaesthesia. On discharge the post-operative instructions are as follows:

1. Stall rest for 7 days and then move to a small yard for another week.
2. No treatment is needed.
3. Maintain the surgery sites covered until suture removal on the 28th December 2017.

If you have any questions regarding this case please contact me at Scone Equine Hospital on the number below.

Dr Angus R Adkins BVSc FACVSc
