Veterinary Report

Client and Patient Details

Client's Name: Terry Robinson (Terry)

Animal Name: Fast Evolving Girl

Species: Equine

Breed: Thoroughbred

Description: Bay

DOB: 1 SEP 14

Age: 5 years old

Sex: Female

Microchip No.: 985100012044317

Clinical Details

Date: 30 SEP 19 14:36

Vet: Dr Mitchell Brown

On the 30/9/19 the above mentioned horse was examined by Illawarra Equine Centre for further assessment of a right fore superficial digital flexor tendon (SDFT) injury.

Ultrasonography revealed a grade 1/4 core lesion in the SDFT extending from 7 to 22 cm below the knee. The lesion consisted of approximately 40% of the cross sectional area of the tendon at the most severe point, which was approximately 15 cm below the knee.

It appears that there has been a reasonable amount of healing over the last 9 months, however, a further 12 months spell is advised. At this point in time a repeat ultrasound examination is advised to determine if the horse can come back into work.

The horse has a guarded prognosis for a successful return to racing.

Please call if you have any questions regarding this report.

Yours sincerely,

Dr. Mitchell Brown BVSc, MANZCVSc (Eq Surgery) N8261
