

LOT 4

**ESPERANCE** (5YO Bay Gelding)  
by BERNARDINI (USA) from SYCOPHANT(Branded  nr sh. 137  
4 off sh.)

## SCOPE IN REPOSITORY

## ROARER

**INELIGIBLE FOR POST-SALE SCOPE:** Left laryngeal function grade 4-5 out of 5 (Roarer)

## VACCINATIONS

3rd **HENDRA VACCINATION** given 23/05/2020.  
Next vaccination required within 12 months from this date.

05-07-2016

An endoscopic examination revealed his left laryngeal function to be grade 4/5.

07-12-2016

Marked lameness of right forelimb. Suspected humeral stress fracture. He returned to soundness with rest and rehabilitation.

30-05-2017

A dynamic endoscope was performed. During the canter exercise he had mild loss of abduction of the left arytenoid, intermittent palatal instability along with intermittent and mild axial deviation of the right aryepiglottic fold. When galloping he improved and maintained laryngeal abduction and intermittent palatal instability.

18-07-2018

An endoscopic examination revealed his left laryngeal function to be grade 4/5.

27-02-2019

Moderate lameness of left hindlimb. Pain on palpation of wing of ileum. Ultrasound revealed a small amount of fragmentation. He returned to soundness with rest and rehabilitation.

24-11-2019

An endoscopic examination revealed his left laryngeal function to be grade 5/5 with a chondritis to his left side.  
This responded well to treatment.

This gelding has also been known to be mildly lame in the left forelimb while in training with Godolphin.
