Re: "Rambition" trained by Mr P Kearney

The above horse has Grade IV recurrent laryngeal neuropathy and had a laryngoplasty and left ventriculocordectomy ('tie-back surgery') performed today. Post-operative endoscopy showed excellent abduction.

Instructions regarding the post-operative care of the horse will be provided with the horse at the time of discharge.

The horse should have a three month spell before returning to work. An endoscopic examination prior to being put back in work may be useful to ensure adequate arytenoid abduction at that time.

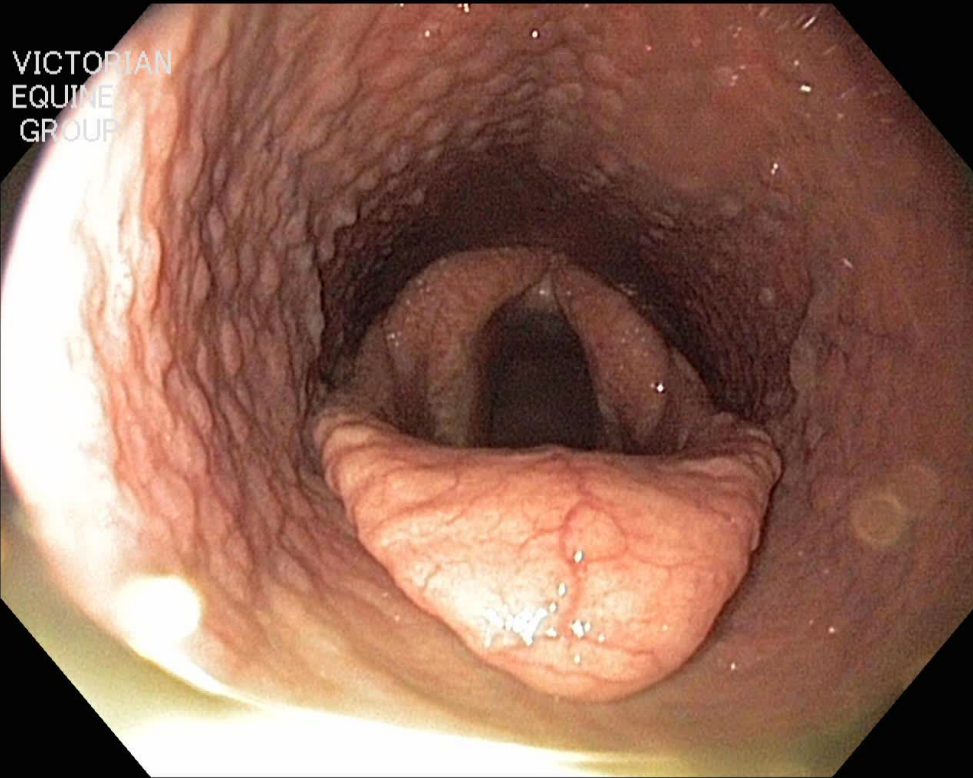

Should you have any further queries, please feel free to contact me on the number above.
