Veterinary Report for "Capital Call" a 4yo Thoroughbred Gelding, c/o Gai Waterhouse Racing

Referring Veterinarian: Brain, Maxine (Advantage Equine)

Client Details

Name	Syndicate of Capital Call	Phone	0410 069 239
Address	16 Bowral Street Kensington, New South Wales 2033		+61 2 9662 1488

Horse Details

Name	Capital Call	Age	4 years
Species	Equine	Sex	Gelding
Breed	Thoroughbred	Microchip	985100012180833
Colour	Bay	Referral	Dr Brain, Maxine - Advantage Equine

Dear Maxine,

Further to reports dated 22-03-2025, 31-03-2025, 07-04-2025 and 12-04-2025 the above gelding has remained hospitalised at South Eastern Equine Hospital for ongoing wound management and treatment of synovial sepsis of left hind digital flexor tendon sheath and septic osteitis of the lateral sesamoid bone.

The gelding is continuing to walk comfortably and the wound appears to have healed well. The sutures have been removed this morning and a bandage reapplied to the limb. Repeat radiographs and bloods were obtained on 14-04-2025 which revealed the following:

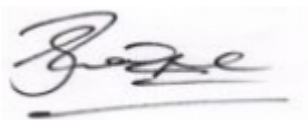

- Radiographs left hind fetlock - no increase in the size of the lytic lesion within the lateral sesamoid bone
- Repeat bloods - no abnormalities of white cell count, fibrinogen and serum amyloid A with all results within normal limits

These findings are consistent with ongoing resolution of sepsis. Recommendations at this point include ongoing administration of antimicrobials for a further week, repeat bloods in 7 days to determine whether antimicrobials can be discontinued and close monitoring of the gelding's comfort level.

The prognosis for return to athletic soundness at this point appear fair to guarded. Once the wound on the plantarolateral aspect of the left hind fetlock has healed completely, a graded increase in hand-walking is recommended over a period of 6 -8 weeks.

Thank you for the referral of this case. Please feel free to contact me on 0387904922 if you have any concerns or questions regarding Capital Call.

Yours sincerely,

Dr Gareth Trope, BVSc (Hons) DipVCS CertES(Orth) MVSc FANZCVS (Equine Surgery)
Registered Specialist in Equine Surgery Adjunct Senior Lecturer Equine Surgery, CSU

Veterinary Report for "Capital Call" a 4 yo Thoroughbred Gelding, c/o Gai Waterhouse Racing

Dear Gai,

South Eastern Equine Hospital

357-359 Belgrave-Hallam Road
Narre Warren North
Victoria 3804

Ph: 0387904922

Email: admin@seeh.com.au

Website: www.seeh.com.au

Capital Call Waterhouse Racing was discharged today from our hospital. Please find a patient update and discharge instructions below.

Report:

Capital call presented to SEEH following a laceration to his left hind. The wound involved synovial structures including his tendon sheath. Surgical lavage and wound debridement was the most appropriate treatment. During his stay Capital Call developed an osteitis of his sesamoid bones in the left hind secondary to the initial wound which required an additional surgery to curette away the affected bone. Capital Call has been responding well to adjunctive antibiotics. He has been walking well and is at the stage where he can continue to be managed at home.

Medication:

Medication	Instructions
Doxycycline	9.4ml orally twice daily for 7 days
Yogurt	30ml orally twice daily for 7 days
Bute	5ml orally once daily for 5 days

Next due: Doxycycline tonight (16/4), bute tomorrow morning (17/4)

Follow up: Please arrange for your referring veterinarian to re-examine Capital Call in 5 days time to perform repeat blood analysis prior to discontinuing antibiotics.

Monitoring:

1. Please change his bandage every two days. His next bandage change is due Friday (18/4). Please apply one additional bandage which can be removed on Monday (21/4) and no further bandaging is required.
2. Monitor his gait. Any increase in lameness please contact your referring veterinarian or SEEH
3. Monitor the consistency of his manure. The use of antibiotics increases the risk of diarrhoea. If you notice him starting to produce unformed manure please contact your referring veterinarian or SEEH
4. Take his rectal temperature twice daily. Normal range is between 37.0 - 38.5, if it increases above 38.7 please contact your referring veterinarian or SEEH

Diagnostic Result

14-04-2025 2:58:50pm, Dr Madeleine Hawkins

Results

Final Report

Specimen: Tendon tissue

Microscopy results: No visible bacteria, Leukocytes +

Culture results:

02/04/2025	Cultures underway.
03/04/2025	No visible growth after 24h.
04/04/2025	No visible growth after 48h. Enrichment culture in progress.
07/04/2025	No growth detected.

CYTOLOGY

Body Fluid Analysis

Body Fluid Site	Tendon sheath
Nucleated Cell Count	0.1 x10 ⁹ /L
RBC Count	0.01 x10 ¹² /L
Total Protein	18 g/L

Cytopathology Report

SAMPLE TYPE:

Tendon sheath fluid. 1.3 mls of slightly cloudy fluid in EDTA. 2 direct and 1 cytospin slide prepared.

MICROSCOPY:

The direct preparations have very low nucleated cellularity with scattered erythrocytes in a light pink granular background. The cytospin preparation has moderate nucleated cellularity and many erythrocytes. The nucleated cells consist of about 65% macrophages that are mostly nonactivated, 32% small lymphocytes, and 3% neutrophils. No organisms or neoplastic cells are seen.

INTERPRETATION:

No evidence of active inflammatory disease

COMMENTS:

There is no concern for a septic process. The small amount of blood in the sample may be associated with sample collection (iatrogenic). If an effusion is present then it is serous in nature.
