At the time of examination the horse was not shod. The mare was in good health, and condition.

Conformation was generally correct. Hoof wall growth and structure was good in all four feet.

There was no lameness at the led walk.

The external reproductive system sloping vulva. An ultrasound exam of the ovaries showed some activity, a 3cm follicle on the right ovary and a normal reproductive tract with folds and no fluid.

Within the limits of this examination the horse represents a normal risk for breeding.
