REPORT ON EXAMINATION OF EBONY REIN

24/8/17

This is to state that on Thursday 24th August 2017, at the request of Terry Walshe, I examined the bay mare, Ebony Rein with microchip number 985100010981450 (brands and markings below).

The examination was requested as a follow up to surgery performed on 22nd June 2017 for an injection site reaction. The reaction occurred initially in mid May and did not resolve with conservative treatment.

At the examination on 24/8/17, the mare was found to be bright and alert, in good body condition, OMM- pink and moist, heart rate- 38, temp- 37.9. The wound has healed over, there was no abnormal swelling and no pain on palpation. The horse walked in a normal manner and was able to turn her head/neck normally to each side.

RODERICK LAMONT, BVSc N6139
